eToken SSO - Your Secure Single Sign-On Solution

Eliminate password headaches for your users and reap the business benefits of increased data security and user productivity.

Password overload puts your business at risk and burdens your IT help desk. Users needing to handle multiple credentials choose easy-to-guess passwords or write them down, increasing the risk of password theft, and need to spend time calling the help desk every time a password is forgotten.

Aladdin's eToken SSO offers a simple, convenient, and secure token-based solution for managing multiple user passwords. Your users can store all their network, desktop application and web logon credentials on-board their personal secure tokens – all they need to remember is a single eToken password to gain access to all their password-protected applications and accounts.

Getting started with eToken SSO is easy. No back-end integration is required, so you will see results right away.

Features

eToken SSO

- Securely stores and automatically fills in network, desktop application and web logon credentials
- Can be deployed with physical tokens or as a software only solution
- Auto-changes user passwords
- Requires no backend integration
- Operates with or without connectivity to the organizational network
- Integrated with eToken Token Management System, providing automatic backup and more
- Multilingual support

Technical Specifications

- Supported operating systems: Windows 2000/2003/XP/Vista
- Supported browsers: Internet Explorer 6 and 7; Firefox 2.0
- Supported devices: All eToken Smartcard based devices

Benefits

- Reduced password-related help desk expenses
- Increased user productivity and satisfaction
- Enhanced security and portability with secure, on-token credential storage and built-in strong two-factor authentication
- Easy and fast deployment
- Facilitates enforcement of password security policies

Strong Security

eToken SSO offers the highest standard of security by fully integrating single sign-on with the eToken family of smart-card-based authentication devices, providing strong two-factor authentication and on-board credential storage. Moreover, as users need to remember only their single eToken password, they can easily comply with even the most stringent password security policies: they can use complex, unique passwords for all their applications and keep them all securely stored on their tokens.

Simple to Use

From first-time enrollment of application logon credentials to ongoing usage, eToken SSO provides a friendly and intuitive user interface so your users spend minimal time and effort on the authentication process. eToken SSO supports automatic fill-in and submission of application logon credentials, and also automatically handles application password change requests.

Centralized management

eToken SSO is fully integrated with Aladdin's eToken Token Management System (TMS), which provides administrators with a full suite of token management services including eToken deployment and revocation, user self-service password reset, backup/restoration of user credentials, and a solution for employee on the road lost token situations, allowing employees to stay productive at all times.
